

Food Systems in European Cities

Deliverable 7.4. – FoodE Website

Project Acronym and Name	FoodE – Food Systems in European Cities
Type of action	IA – Innovation Action
Grant Agreement No.	862663
Work package	7
Dissemination level	Public
Document type	Website
Lead partner	HCA
Authors	Arctur – Tina Č. Marc, Jerneja Penca, Tiva Turk, Tjaša Zornik, Klemen Albreht, Klemen Susič, Metka Špacapan
Contributors	Jose Pascual, Isabella Righini, Aleksandar Atanasov, Alex Klein, Anca Gheorghica, Lélia Reynaud-Desmet, Agnes Lelievre, Kathrin Specht, Runrid Fox-Kämper, Bernd Pölling, Matteo Vittuari, Adam Curtis, Joacim Kontny, Renata Zamida, Chiara Cirillo, Marco Gazzi, Erwin Nolde, Inti Bertocchi, Benjamin Vidmar, Pere Muñoz
Planned delivery date	31 May 2020
Actual delivery date	29 May 2020
Project website	www.foode.eu
Project start date	1.02.2020
Duration	48 Months
Version	1.0

1. Introduction

Arctur's task in WP7 was to design and develop the FoodE webpage (T7.1.4.), all other partners were asked to provide content.

The project requirements were to provide a website for external users (for dissemination and project promotion) and for internal users (internal partner area). FoodE app will also be integrated within the website.

The website release was planned in M4 (May 2020).

For purpose of the ICT providing, Arctur registered a new domain for the FoodE website, 4PM and mailing lists: *foode.eu*.

All services will be hosted in Cloud Data Centre, secured and managed by Arctur.

In the Arctur Data Centres, hosting of virtual and physical servers is offered, colocation for all server types as well as rack space hosting. All data security, IT hardware and software description of Arctur Data Centre is available in *FoodE_Deliverable 8.2_Protection of personal data*.

2. Website development and design

2.1. Internal partner area – 4PM

Arctur provided a tool for project management, called 4PM, developed and managed by Arctur itself.

4PM is a web application (SaaS) for project management support, collaboration, and document exchange. It supports the needs of various project team members, whole consortia and stakeholders.

4PM tool offers:

- document exchange with multi-level rights hierarchy,
- document versions and history accessibility,
- folder and document comments and keyword search,
- more productive and collaborative teams,
- discussion forum on the project and project activities,
- project roadmap divided into WPs, tasks and subtasks,
- a full overview of team communication,
- the easier organization of meetings and activities with e-mail synchronization,
- mailing list system for different (work package) project team,
- project archive.

The document management module supports an easy and secure location for document storage and exchange. All project information is accessible in one secure place and communication is transparent. Rights to view and edit are manageable, document history and versions are available. Document and folder trees uploads are easy, features like metadata, copy-paste, folder statuses, and un/lock folders or documents are available.

4PM online tool can be the central communication point, independent of language, cultural differences and location. Its features are greater than document exchange, communication and

collaboration. Other functionalities of this multi-user environment include also automatic export of timesheets for project reporting, hourly work input, finance planning and realization and many more.

For its functionality in FoodE, the 4PM platform was divided and structured into two parts:

- **Project management**

Here, members see the structure of the FoodE project – divided into WPs and tasks. Milestones are also included.

Each task is dedicated to a closed group of members, who will work on it. Here, members can add important comments and documents, so everyone can follow the workflow and know what has been done so far. Only the most important info is added here and individuals can see which members are included within each task and can send them emails or organize meetings.

- **Document repository**

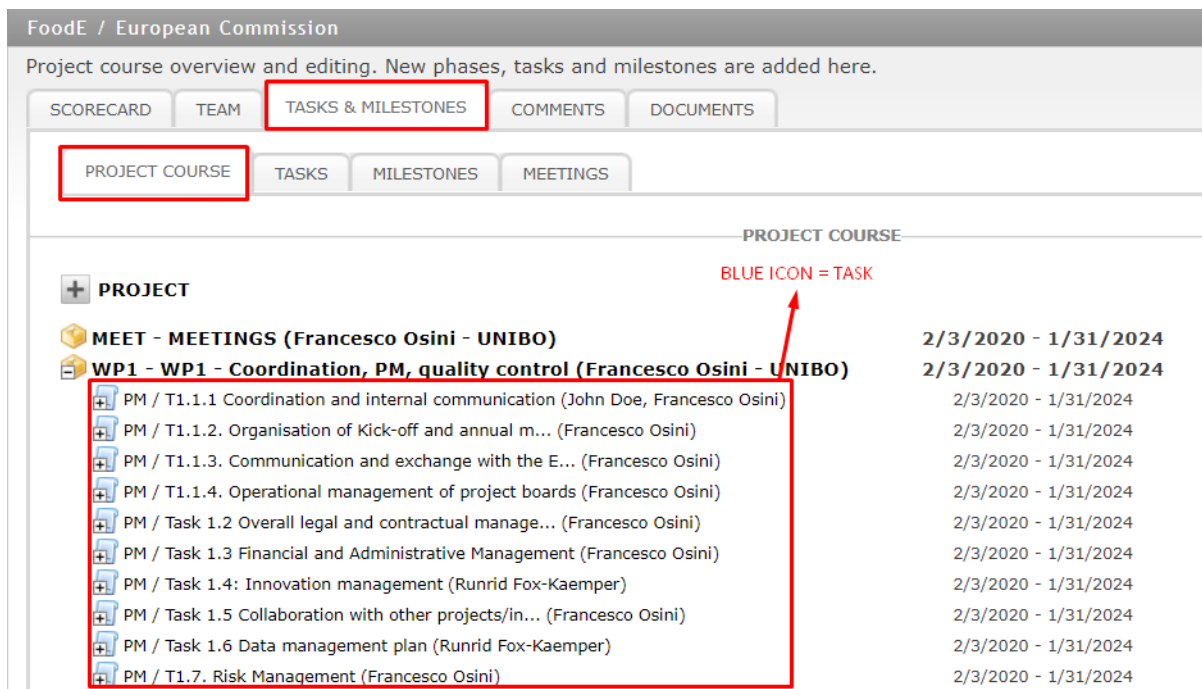

In the document repository all members can:

- download documents (all files),
- upload documents (all files),
- upload different document versions,
- check download history and version history (all versions are available),
- add comments on documents or folders,
- send documents links to colleges,
- change folder statuses.

Instruction for usage of tool were prepared – please see files uploaded in document repository:

- *Foode_Internal_Partner_Area_Instructions_6_4_2020*
- *Videos: 4PM_tasks_work_instructions and Document_repository_instructions*

All members were provided with personal credentials to enter the system. Data security and protection of personal data collected in this tool were explained in detail in *FoodE_Deliverable 8.2_Protection of personal data*.

BLUE ICON = TASK

2.2. FoodE mailing lists

Arctur prepared and released 14 mailing lists so far (till 27.05.2020), managing in tool *Sympa*:

All members: all@lists.foode.eu

Scientific contacts: sc@lists.foode.eu

WP leaders + co-leaders: wpleaders@lists.foode.eu

Pilot projects: pilotprojects@lists.foode.eu

General Assembly: ga@lists.foode.eu

Advisory board: advisoryboard@lists.foode.eu

Stakeholder board: stakeholderboard@lists.foode.eu

WP1: wp1@lists.foode.eu

WP2: wp2@lists.foode.eu

WP3: wp3@lists.foode.eu

WP4: wp4@lists.foode.eu

WP5: wp5@lists.foode.eu

WP6: wp6@lists.foode.eu

WP7: wp7@lists.foode.eu

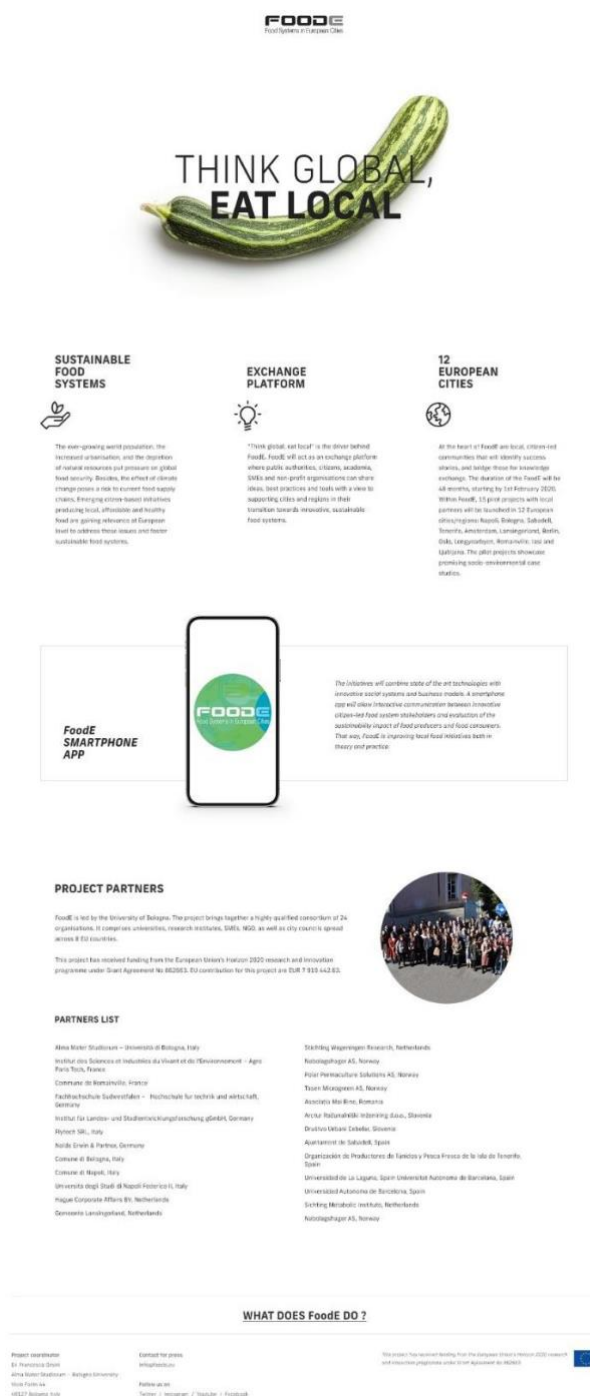

Contacts, divided on separate mailing lists, are available here:

https://docs.google.com/spreadsheets/d/12jvRX7SKD9Fadsil6MAXueDG7I7SWH5j_U9QYSUUGX8/edit?usp=sharing

2.3. Splash site

Before official website release, Arctur prepared a simple one-page website, so-called “splash” website. This was a simple landing page, presenting FoodE project. It provided the general public with information about the project and the partners.

Picture 2: Splash website

2.4. Website

Arctur has developed its own content management system ADS4 which is the basis for the FoodE Website content management. ADS4 (Arctur Data System, 4th Generation) is a content management system (CMS) that we developed in order to facilitate the realization and maintenance of web sites we project and make for our customers. ADS is based on the principle of web content and web design separation, thus allowing web site editors to focus on the contents without having to care for the page layout.

ADS editorial interface is built for easy and intuitive use. No special know-how is required to work with the CMS interface, and no additional software is required: all the interfaces are accessible via a web browser.

ADS is based on PHP scripting technology and MySQL relational database. ADS can also be integrated into systems based on other technologies.

ADS enables different approaches to contents display and includes a number of modules for functionalities and interactive features: news module, an e-mail list module, events calendar, on-line product catalog, etc.

Website development roadmap:

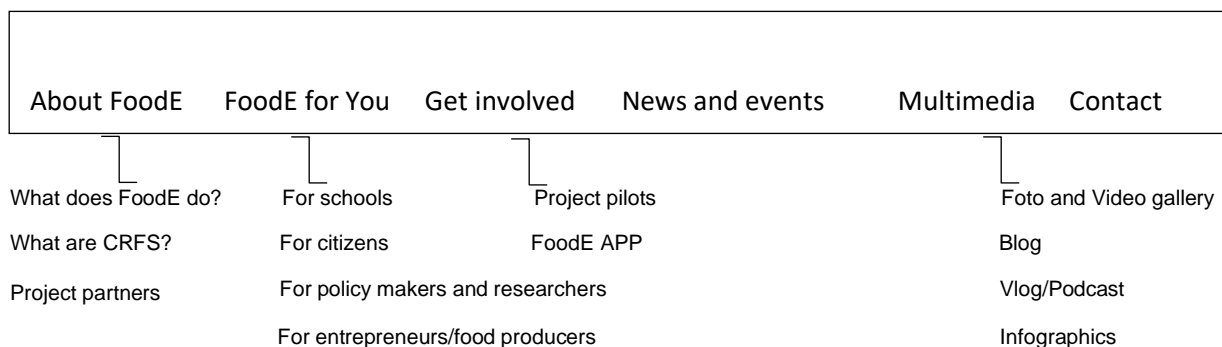

The first wireframe (content layout, menu system) was presented to HCA and coordinator. After the wireframe was confirmed, partners were asked to provide the content for the website. All content and visual files provided on the website have to respect copyrights and IPR, all photo material has to be provided according to the naming convention presented in deliverable FoodE_WP1_D1.6 Naming_Convention.

The FoodE webpage is fully responsive (fitting to all digital devices screens and systems). Data security and protection of personal data collected within the webpage (and app later) were explained in detail in FoodE_Deliverable 8.2_Protection of personal data.

In Phase 1, the website is structured from 6 main menus and several submenus. The webpage will be directly connected with social media profiles, so Twitter and Instagram profile will be visible on the webpage.

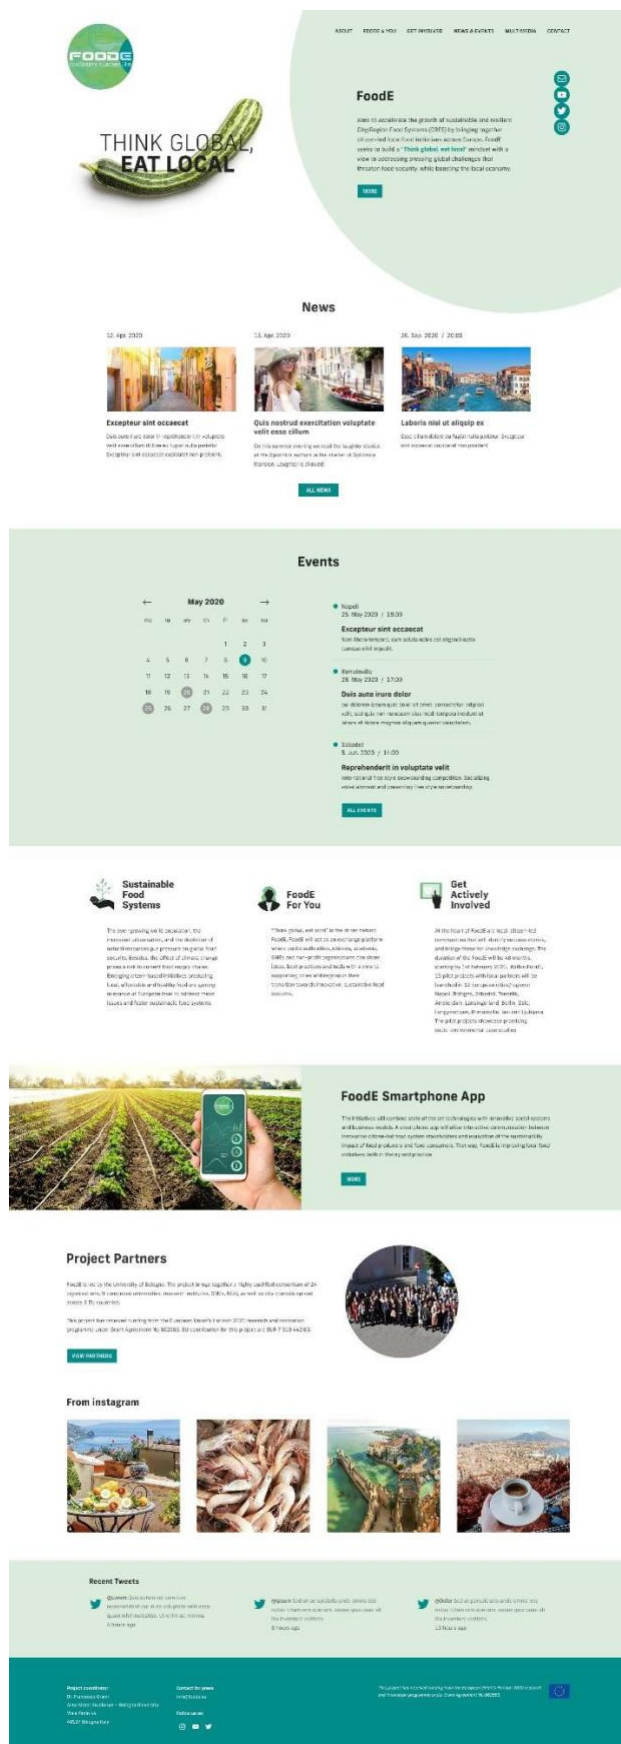

The website will be live – so it will change through project lifetime. In this first, starting phase, it is provided as below (please notice concept includes provisional texts and photos).

Picture 3: FoodE webpage, wireframe Phase 1

Picture 4: Webpage concept, homepage, Phase 1

From the homepage, users can enter different subpages via content, provided on the website or via the main menu, provided on the top of the page.

FoodE slogan: “Think global, eat local” is exposed in GIF.

Then the last three news will be visible, with the “call to action” button “All news”, leading user to News subpage where all news will be available.

Events will be presented in the calendar with monthly preview option – when clicking on the date, event name will be shown, with location and a full description of the event, photos, and videos can be added too.

Three “icon” sections indicate a short description of “What does FoodE do”, “Get involved” and “Pilot projects”.

One banner is devoted to the main output of the project, FoodE APP, where users can enter into APP when it will be provided.

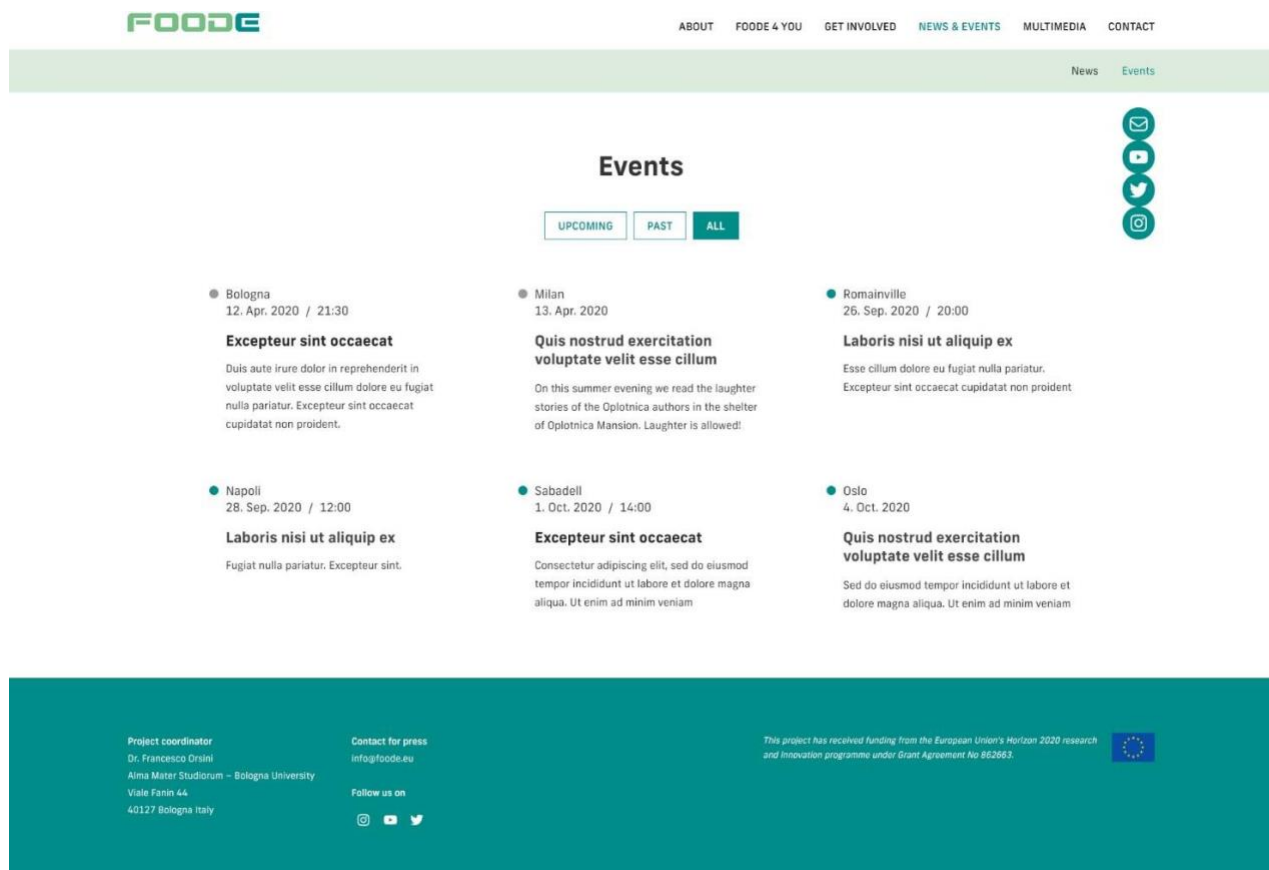

The section about Project partners introduce partners via Organization logos, their names and is linked to partners’ homepages.

The last part of the website is dedicated to social media profiles – here Twitter, Facebook and Instagram feeds will be provided.

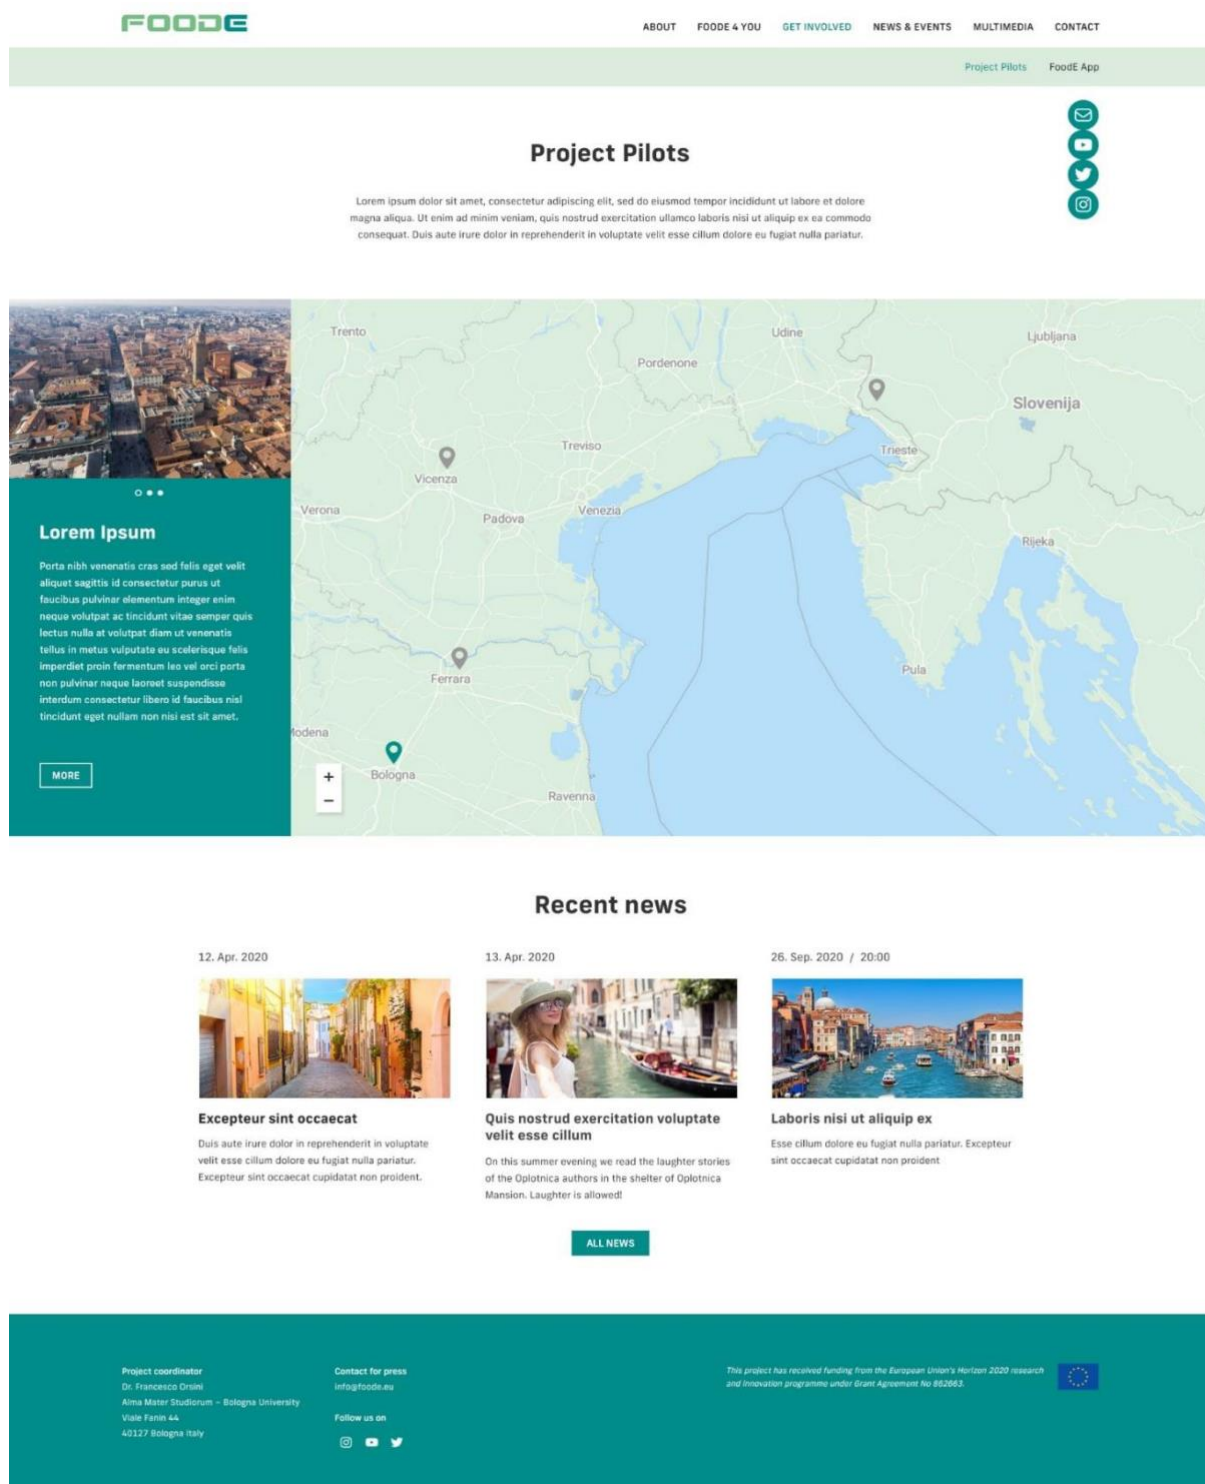

In the footer, contacts of the project coordinator, social media icons, and EU emblem are provided.

Picture 5: Webpage concept, events, Phase 1

Picture 6: Webpage concept, pilot projects, Phase 1

Pilot projects will be shown on the map (pins). When clicking on the pin, the box with a short introduction and photos of the project will be provided. When clicking on the CTA button "More", the user will be redirected on the pilot's subpage, where a full description of the pilot and all other information will be provided.

Follow us on

This project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 852663.

- domain name registration
- consulting
- visual concept
- programming
- technical consulting
- testing
- website publication
- hosting
- maintenance and user support.

Email inboxes, websites, and web apps simply need to work at all times and high loads. The hosting of websites and web systems on Arctur's servers is protected by an anti-virus system, and security against intrusions is adequately taken care of. Servers also have an uninterruptible power supply and regular systematic backup of data. All types of hosting allow the implementation of web scripting languages PHP, Perl, ASP and .NET and run on Linux and Windows servers.

3. Conclusion

The launch of the FoodE webpage at M4 is a milestone but the webpage is a dynamic one, and will be continually developed and upgraded. The website is the face of the project and will be constantly updated by the Arctur and HCA teams, relying on the content provided by all partners. To fully exploit and use the webpage, all partners will have to promote the content provided on the website via (their) social media, events, and PR.

Appendix 1: ISO/IEC 27001:2013 System certificate SI20/30223176

Certificate SI20/30223176

The management system of

ARCTUR d.o.o.

Industrijska cesta 1a,
5000 Nova Gorica, Slovenia

has been assessed and certified as meeting the requirements of

ISO/IEC 27001:2013

For the following activities

Design, development, production and support of solutions for customers in the fields of HPC, Cloud computing, Research and Development, and advanced IT solutions. Assessed in accordance with the Statement of Applicability v1 from 17.01.2020.

This certificate is valid from 14 April 2020 until 13 April 2023 and remains valid subject to satisfactory surveillance audits. Recertification audit due a minimum of 60 days before the expiration date. Issue 1. Certified since April 2020

Appendix 2: Technical equipment

Arctur-2 is Arctur's flagship hyper-converged HPC & Cloud computing infrastructure. It has been designed and built to fit various and diverse usage scenarios, from general use Cloud Computing to HPC computing as well as Big Data analytics. By converging different types of servers into a single entity, we have achieved high performance, energy efficiency, and seamless management, enabling us to provide excellent services to our customers.

Technical details:

- CPU cores from Intel Xeon E5 v4 CPUs
- 1 TB of memory per node with high memory-density nodes
- 8 TB and 224 CPU cores SMP system
- servers with multiple locally attached hard drives for Software-Defined Storage and Big Data analytics
- GPU nodes with NVIDIA Tesla GPUs
- 25/100 Gigabit Ethernet network from Mellanox
- 1.5 PB of distributed storage, based on CEPH technology
- multiple block storage with all-flash arrays for cloud computing workloads

In the Arctur Data Centres, we offer hosting of virtual and physical servers, colocation for all server types as well as rack space hosting. Efficiently cooled and secured locations with redundant electrical and internet sources provide high availability (>99.98%).
