- In the **Metanoia** monastery in the Delta, Latinophones were a majority and interpreters were needed

In short:

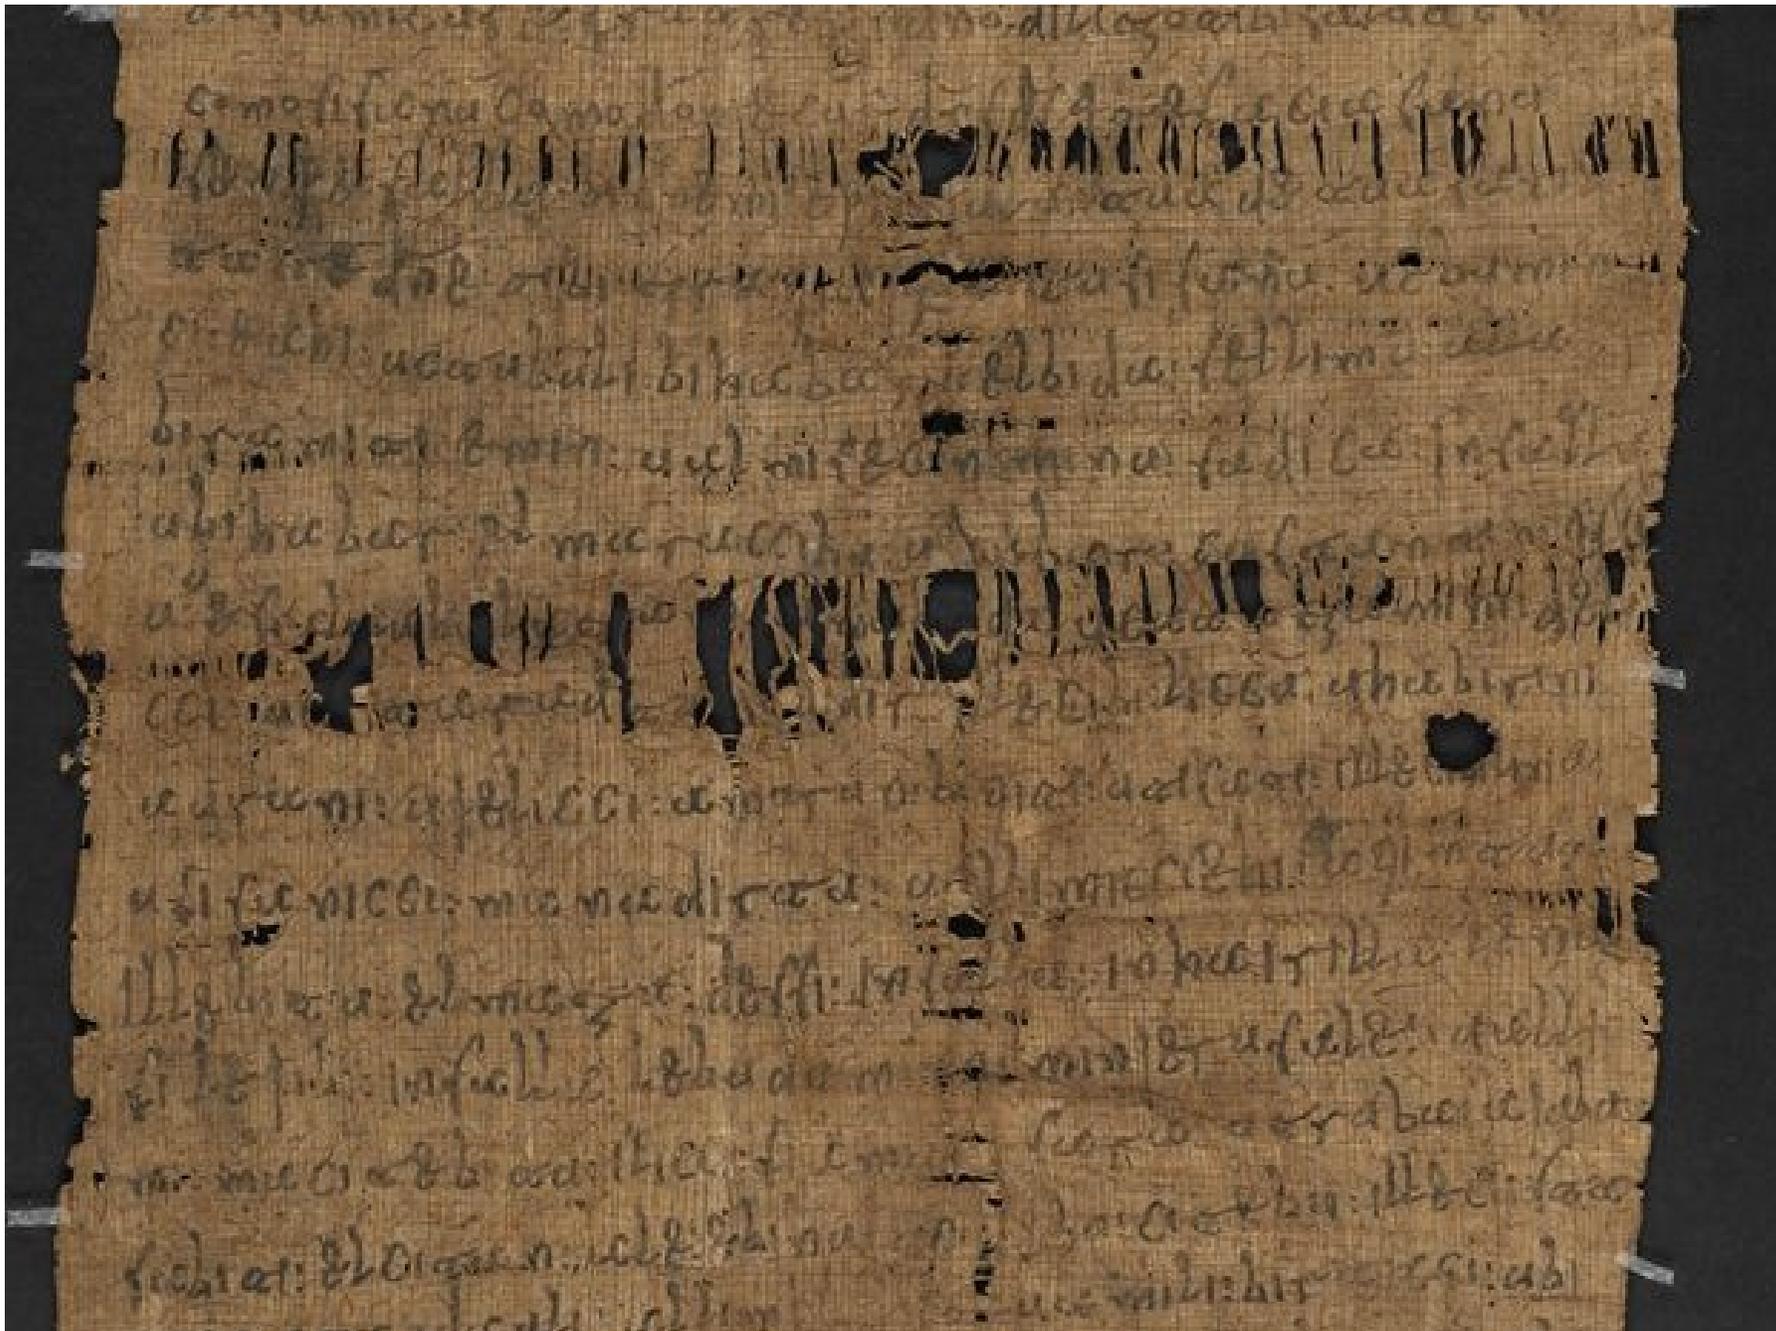

- 'There was linguistic contact and there was exchange between speakers of Latin and speakers of Coptic. The sources describe the linguistic context of the early monasteries in some detail. **Texts were translated, even in both directions, sometimes with the mediation of Greek, and sometimes perhaps without it.** Travellers returned home to the West carrying a treasure of ascetic knowledge, ready to found their own communities and produce their foundational texts' (Torallas Tovar)

The image shows a fragment of ancient papyrus with handwritten text in a cursive script. The text is written in dark ink on a light brown, fibrous material. The fragment is irregularly shaped with several holes and tears. A blue oval highlights a specific section of the text. The script is dense and difficult to decipher, but some words are visible. The fragment is set against a white background, which is itself on a larger grey background.

] praesidi p[rouvinciae

‘This Latin hand is **perceptibly different from the one in line 20**, which is quite possibly to be regarded as the autograph subscription of the *beneficiarius*. What is more difficult to decide is **whether the writer of line 1 also wrote the body of the report in Greek**. The texture of the ink and the thickness of the pen seem very similar; on the other hand the Greek is spiky and jerky, while the Latin here seems rather smooth and fluent. The small sample of Latin makes decision difficult. **Tentatively, and reluctantly, it has been assumed that three writers contributed to the document.** The question whether this means that the *beneficiarius* had ‘Greek’ secretary and a ‘Latin’ secretary must remain unanswered’ (Rea p. 41).

] praesidi p[rouinciae

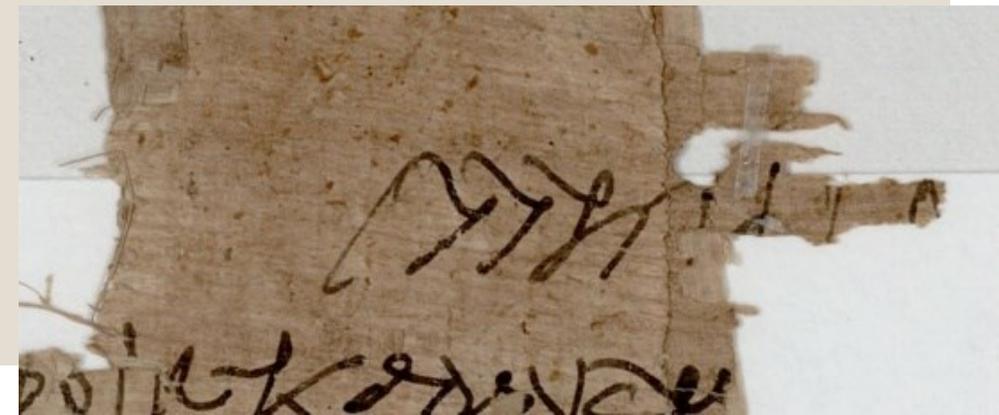

The two notations

1. **Both** writings come from the **sender's** office. Either Valerius Diogenes or a clerk subscribes the document at the bottom; then another clerk writes in large letters *praesidi prouinciae* in the upper margin, then the petition is transmitted to the governor's office
2. The **subscription** is from **Valerius Diogenes** (or a clerk of his office); then the petition is transmitted to the governor's office, where a **clerk** glues it in a τόμος συγκολλήσιμος and adds at the top *praesidi prouinciae*, in order to point out the addressee among the several others petitions collected in the *tomos*.

- P.Oxy. XVIII 2194 (IV-V AD)
- P.Köln IV 200 (IV-V AD)
- P.Petra V 55 (AD 573)
- P.Lond. inv. 3124 (VII–IX AD)
- Letters where the sender and the addressee somehow share a common educational or religious *milieu* which envisages a bit of Latin language, and like to show it in their correspondence
- A testamentary disposition where the testator, while bequeathing his estate, inserts Latin clauses reminiscent of his probable former career in the army
- Letters from provincial chancery where some apparently random data, including the letterhead, are written in Greek and then translated in Latin
- Letters where **Latin notations** were inserted, maybe for **archival or validation purposes**

AND YOU CALL **THIS**
'CONCLUSIVE EVIDENCE' ?

(No, of course I don't.)

But we can draw some lines

- Latin official documents from Late Antique Egypt represent a state-mandated documentary typology: the authority will – under a few specific circumstances – speak Latin to their subjects
- When the authority speaks in **Greek** – in the greatest majority of cases – still **a Latin seal is required**, to let the subjects know who is the speaker: e.g. a **dating formula**
