

LEARNING AND TRAINING
BLENDED INTENSIVE PROGRAMME 2022/23
Digitizing a lexicon. How to work with words for the study of
Religions in the Graeco-Roman World
(organizers: Giuseppina Paola Viscardi, Gaetano Spampinato)

What is a lexicon of religious terms and
the advantages of the Digital Humanities
The Digital Lexicon LARES

Online
21/04/23

1. Printed Lexicon vs Digital Lexicon
2. How LARES works (from a front-end perspective)
3. What does semantic markup mean and its advantages
4. The basic rules of XML
5. EpiDoc for LARES
6. Set-up of the work environment (in view of May)
7. How LARES works (from a back-end perspective)

1. Printed Lexicon vs Digital Lexicon

“A digital edition cannot be given in print without significant loss of content and functionality”. (Patrick Sahle)

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

scans in image format: text available online, archiving (e.g. [Gesenius Hebrew Lexicon](#) online)

digitization as ‘typed text’ (TXT, PDF, HTML...): searchable text

relational databases: searches by fields (useful for metadata, less for texts)

semantic markup (XML): improved search functionalities, indexing and much more!

2. How LARES works (from a front-end perspective)

LARES - Language and Religion

**Lexical Change and Variation
in Religious Enculturation / Acculturation phenomena of the Ancient World**

LARES Language and Religion: Lexical Change and Variation in Religious Enculturation / Acculturation phenomena of the Ancient World (<https://site.unibo.it/lares/en/>) is a research foresight project funded by the action 'seed funding' of the UNA-Europa Network and it is promoted jointly by: Alma Mater Studiorum – Università di Bologna, Helsingin Yliopisto, Uniwersytet Jagielloński w Krakowie, Universidad Complutense de Madrid.

Original publication: "Animal Sacrifice in Ancient Greece" database ([link](#))

Authors: Lech Trzcionkowski (2015-03-31: written contents); Irene Vagstad

Show/hide: [links](#) [practice](#) [belief](#) [fiction](#) [sign](#) [sense](#)

μηρία mēria, subst. n., plurale tantum, femur, femora (l.sing. femur).

Etymology

The participial adjective μηρία "femur, thighbone" (< "thigh", default. ὄστε 115); used in the plural in the technical sense of "thigh bones of cattle, sheep less commonly: δημός, ἐπιπόλαιον, πιμελή) and then burned on an altar. (→ μῆρα ↗), in later texts it has almost completely replaced it (Chantraine 1

Testimonies

The verb μηρία appears in the context of activities comprising three successive phases of the ritual process: (1) the preparation of the part of the sacrificial animal destined for the gods, i.e. (1a) the cutting off of the legs and the trimming of the μηρία ἐκτάμνω/ἐκτέμνω, 'I cut off, I cut out, I trim', cf. Meuli, 1946, 216-7), (1b) 'hiding' the μηρία by wrapping them bilaterally with a fatty peritoneal membrane ([κνίση] κατακαλύπτω, 'I cover (with fat)', and (1c) placing raw pieces of meat from other parts of the animal on them (ἐπ' αὐτῶν ὠμοθετέω, 'on them (i.e. legs) I lay the pieces of meat'); (2) the laying of the portion destined for the gods on the altar: ἐπιτίθημι, 'I arrange, lay on (the default. altar)'; (3) burning: καίω, 'I burn, I burn', δαύω, 'I burn'. To this should be added references to (4) the use of the ashes resulting from the burnt bones.

1. The preparation of the part destined for the gods.

In the Homeric epic, the expression ἐκ μηρία τάμνον ("they cut out the femurs", with the thesis Od. 3.456) appears in a detailed description of the sacrifice made by Nestor to Athena (Od. 3. 456b-457): ἄφαρ δ' ἐκ μηρία τάμνον / πάντα κατὰ μοῖραν, κατὰ τε κνίση ἐκάλυψαν ('when they cut out the femurs, all as they should be, and hid them in the fat of the peritoneum'), which is a variant of a more common version of the description of the procedure for preparing the thighs (μηρούς) for burning (Il. 1.464-5 = Il. 2.427-8 = Od. 12. 364-5): μηρούς τ' ἐξέταμον κατὰ τε κνίση ἐκάλυψαν / δίπτυχα ποιήσαντες, ἐπ' αὐτῶν δ' ὠμοθέτησαν, 'they cut out the hind legs and hid them in the fat of the peritoneum, / doubly wrapped, and laid raw trimmings on them'. In the mentions of sacrifices embedded in the characters' utterances, the wrapping of μηρία with fat is metonymically signalled by the adjectives πίων 'fat' (7x in the Homeric epic), ἀγλαά "shiny" (Hes. Op.337), the noun δημός "fat" (2x) or the expression καλύψας πίοι δημῶ (1x).

In the *Room of Aristophanes* (Pax 1025) it is recommended that the femurs be cut out after the sacrifice, i.e. after the ritual slaughter of the animal in the skene, and brought to the orchestra: θύσας τὰ μηρῖ' ἐξελάων δευρ' ἔκφερε. The word μηρία probably appears in a fragment of Eubulos' comedy *Semele* Eubulos (fr. 94 Kassel-Austin = fr. 95 Kock, corrupted text, crux philologorum), where Dionysus complains about the composition of the parts of the sacrificial animal intended for the gods: πρῶτον μὲν ὅταν ἐμοί τι θύωσιν τινες, / αἶμα, κύστιν, ἥπαρ, καρδίαν, / ὕμέν' ἐπιπόλαιον- οὐδ' ἐγὼ γὰρ ἐσθίω / γλυκεῖαν οὐδὲ μηρία. "First, when any offerings they give me, / It is only blood and bladder, heart, liver also, / And the thin outer membrane, but I eat not, / Neither gall nor bone from the hip taken after all. / (...) and the upper part of the hip (translated by Janina Niemirska-Pliszczyńska).

βαρεία χείρ

Original publication: LARES born digital document.

Authors: Giuseppina Paola Viscardi (2021-11-15: written contents); Irene Vagionakis (2021-11-15: encoded in XML)

Show/hide: [links](#) [practice](#) [belief](#) [fiction](#) [sign](#) [sense](#) [speech](#) [systems](#) [instruments](#) [structures](#)

Morfologia

Βαρεία ♀, agg., *f* (βάριος *m*, βάρύ *n*). Dal proto-ellenico *g^warus, dal proto-indoeuropeo *g^werh₂us. Affine al sanscrito guru- (da cui il sost. guru, cfr. GUSMANI 1971, 98-105), latino gravis (da cui gravitas, cfr. WAGENVOORT 1941; vedi anche GONDA 1947, 124).

Χείρ ♀, sost., *f* (genitivo χειρός). Dal proto-ellenico *k^weh₂r, dal proto-indoeuropeo *ǵ^hes₂r. Affine all'antico armeno (grabar o krapar) *jeht*, persiano antico *d-s-t* /*dasta*/, albanese *dorë*, tocario A (tocario orientale) *tsar*, latino *hir*.

Credenziali

La prima attestazione del sintagma βαρεία χείρ si ha in *Ilias* L.219 ♀ (χείρα βαρείαν; attestato al plurale già in *Ilias* I.89 ♀: βαρείας χείρας). Siamo alla scena della lite iniziale tra Achille e Agamennone che scatenerà l'ira funesta dell'eroe di Ftia e il suo temporaneo ritiro dalla guerra contro Troia (vv. 84-100): l'indovino Calcante ha appena vaticinato che Apollo Lungisaettante getterà gran pena sui Danai finché Criseide – fatta prigioniera a Troia e andata, come bottino di guerra, al re degli Argivi Agamennone – non sarà liberata e restituita al padre Crise, sacerdote del dio; costretto perciò dal Pelide a restituire a suo padre Criseide, il tracotante Agamennone decide allora di prendersi Briseide, bottino di guerra di Achille, come atto di forza sul re dei Mirmidoni. Accecato dall'ira, Achille «fu incerto tra due: se sfilare la spada puntuta ♀ via dalla coscia (φάσγανον ♀ ♀ ♀ = μάχαιρα ♀ ♀ ♀) e uccidere l'Atride o se calmare l'ira e contenere il cuore»; ma interviene Atena a fermare l'eroe, prendendolo per la chioma, e a placarne l'animo, inducendolo a «trattenere la **mano pesante** ♀ sull'elsa d'argento» e a «rinfoderare la spada (ξίφος ♀ ♀ = ἄορ ♀ ♀)»:

3. What does semantic markup mean and its advantages

Semantic Markup: based on **XML** (eXtensible Markup Language), it operates semantic distinctions by adding information about the text, resulting in several advantages:

- It facilitates indexing (creation of indices of mentioned elements)
- It makes searches by filters more accurate (browse also by mentioned elements)
- It facilitates data processing and analysis (frequency, relations...)
- It enables multiple outputs from a single input (HTML, PDF, ePub...)
- It gives more control over documents and facilitates their updating
- It facilitates data reuse (own or others', also in the future)
- It facilitates data aggregation and exchange and links between online resources (LOD)
- It provides long-term sustainability: compatibility, low risk of obsolescence, LOCKSS (“lots of copies keep stuff safe”)

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

RENDITIONAL MARKUP VS SEMANTIC MARKUP

Renditional markup (e.g. HTML: HyperText Markup Language)
Structural and graphic features of a text

`<i>Divina Commedia</i>` ⇒ *Divina Commedia*
`<i>ad maiora</i>` ⇒ *ad maiora*

Semantic markup (XML: eXtensible Markup Language)
Structural and semantic features of a text

`<title>Divina Commedia</title>` ⇒ *Divina Commedia*
`<foreign>ad maiora</foreign>` ⇒ *ad maiora*

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

SEMANTIC MARKUP IN XML: AN EXAMPLE

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

SEMANTIC MARKUP IN XML: AN EXAMPLE

```
<bibl>
  <author>Bodard, Gabriel</author>,
  <author>Yordanova, Polina</author>.
  <date>2020</date>.
  <title level="a">Publication, Testing and Visualization
  with EFES: A Tool for All Stages of the EpiDoc XML
  Editing Process</title>.
  <title level="j">Studia Universitatis Babeş-Bolyai
  Digitalia</title>
  <biblScope unit="volume">65</biblScope>:
  <biblScope unit="page">17–35</biblScope>.
</bibl>
```

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

4. The basic rules of XML

1. Use of **tags**, delimited by angle brackets

```
<placeName>Bologna</placeName>
```

2. Base XML element

(opening tag + content + closing tag)

```
<element attribute="value">content</element>
```

Example: `<coord type="latitude">7.175</coord>`

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

3. Empty XML element, for punctual features
(unique opening and closing tag, with no content)

`<element attribute="value"/>`

Example: `<lb n="1"/>`

4. Avoid `<` `>` `&` within the text since they are special characters dedicated to indicate tags and entities: replace them with `<` `>` `&`;

<code><</code>	becomes	<code>&lt;</code>
<code>></code>	becomes	<code>&gt;</code>
<code>&</code>	becomes	<code>&amp;</code>

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

5. There is no difference between having one space or many spaces

`<w>town</w> <w>of</w> <placeName>Bologna</placeName>`

`<w>town</w> <w>of</w> <placeName>Bologna</placeName>`

`<w>town</w>`

`<w>of</w>`

`<placeName>Bologna</placeName>`

6. There is a difference between having a space or not having a space:

- do not omit necessary spaces
- do not add extra spaces inside the elements

`<w>town</w><w>of</w><placeName>Bologna</placeName>` **NO**

`<w>town </w><w>of </w><placeName> Bologna</placeName>` **NO**

`<w>town</w> <w>of</w> <placeName>Bologna</placeName>` **YES**

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

7. Each element can have multiple attributes, the order of which is irrelevant

```
<placeName type="town" sameAs="Bononia">Bologna</placeName>  
=  
<placeName sameAs="Bononia" type="town">Bologna</placeName>
```

8. All opening tags must be followed by a closing tag (if not empty)

```
<w>town <w>of</w> <placeName>Bologna</placeName>      NO  
<w>town</w> <w>of</w> <placeName>Bologna</placeName>    YES
```

9. Each element must be opened and closed within its ancestor element, in a hierarchical nesting

```
<w><placeName>town</w> <w>of</w> Bologna</placeName>    NO  
<placeName><w>town</w> <w>of</w> Bologna</placeName>    YES
```

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

10. The entire document must be contained in a root element

```
<w>town</w> <w>of</w> <placeName>Bologna</placeName>  
<w>town</w> <w>of</w> <placeName>Florence</placeName>
```

NO

```
<document>
```

```
<w>town</w> <w>of</w> <placeName>Bologna</placeName>  
<w>town</w> <w>of</w> <placeName>Florence</placeName>  
</document>
```

YES

11. Attribute values can only contain plain text, not markup

```
<placeName sameAs="<foreign>Bononia</foreign>">Bologna</placeName>  
<placeName sameAs="Bononia">Bologna</placeName>
```

NO

YES

XML SYNTAX: WELL-FORMEDNESS

If the syntax rules are followed, the document is said to be **well-formed**

Examples of syntax errors:

```
<book>
  <page>
    <paragraph>.....</paragraph>
    <paragraph>...
  </page>
  <page>
    ...</paragraph>
    <paragraph>.....</paragraph>
  </page>
</book>
```

```
<w lemma="<i>lex</i>">legis</w>
```

```
<name>Valent<in>iani</name>
```

```
<bibl><author>Bodard & Yordanova</author>...</bibl>
```

XML allows the creation of elements and attributes at will for example: `<chapter>`, `<chap>`, `<capitulum>`, `<cap>`, but needs a shared standard guaranteed by the XML schema

The XML schema defines a set of available elements, attributes and values and determines which elements, attributes and values can (or should) be used in a given context

Example: for paragraphs we use `<p>` and not `<paragraph>`

Example: `<p>` can be included in `<div>` (text division), but not vice versa

If the schema rules are followed, the file is both **well-formed** and **valid**

Slightly modified from
Digital editions and
semantic markup:
XML, TEI, EpiDoc
(Irene Vagionakis -
Gabriel Bodard)

5. EpiDoc for LARES

EpiDoc is a TEI (Text Encoding Initiative: <https://tei-c.org/>) sub-standard for epigraphy, papyrology, ancient documents in a broad sense and one of the most structured TEI sub-standards:

Guidelines: <https://epidoc.stoa.org/gl/latest/>

Markup List: <https://lsv.uky.edu/archives/markup.html>

Homepage: <http://epidoc.sf.net/>

EpiDoc on GitHub: <https://github.com/EpiDoc>

EpiDoc on Digital Classicist: <https://wiki.digitalclassicist.org/EpiDoc>

6. Set-up of the work environment (in view of May)

XML Editor (Oxygen):

https://www.oxygenxml.com/xml_editor/download_oxygenxml_editor.html

XML Visualization/publication platform (EFES):

<https://github.com/EpiDoc/EFES>

7. How LARES works (from a back-end perspective)

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <?xml-model href="http://www.stoa.org/epidoc/schema/latest/tei-epidoc.rng" schematypens="http://relaxng.org/ns/structure/1.0"?>
