Research contract for Enea - Ministero dello sviluppo economico RdS PAR 2019 - 2021 "Study on sustainable aqueous batteries and interphase between electrode and electrolyte for advanced batteries" @ Laboratory of Electrochemistry of Materials for Energetics at the Department of Chemistry "Giacomo Ciamician" – University of Bologna

Supervisor: Catia Arbizzani

Research activity: Study and characterization of materials and interphases for electrochemical storage of energy from renewable sources.

1 JUL 2020 – 28 FEB 2021 Bologna, Italy

GRADUATE RESEARCH UNIVERSITY OF BOLOGNA

Master degree internship at the Laboratory of Electrochemistry of Materials for Energetics at the Department of Chemistry "Giacomo Ciamician" – University of Bologna

Thesis: "Characterization of aqueous electrolytes for sustainable sodium-ion batteries"

Supervisor: Prof.ssa Catia Arbizzani Co-Supervisor: Dott. Morteza Rahmanipour

Research activity: Preparation of concentrated aqueous electrolytes based on sustainable and environmental friendly sodium salts. Conventional and novel electrode preparation and cell assembly. The chemical-physical characterization was achieved using: Conductivity and viscosimetric measurement for the electrolyte, Scanning Electron Microscopy (SEM), X-ray diffraction analysis (XRD) and Fourier-transform infrared spectroscopy (FTIR) for the morphology and structure of electrodes. The electrochemical characterization was achieved using: Cyclic voltammetry (CV), Galvanostatic charge/discharge cycles (GCPL) and Impedance spectroscopy (EIS).

1 JUN 2017 – 31 OCT 2017 Falconara M.ma, Italy

TRAINEE UNIVERSITÀ DI BOLOGNA - A.P.I. REFINERY OF ANCONA S.P.A.

Bachelor degree internship at A.P.I. Refinery of Ancona S.p.A.

Thesis: "Assesment on the impact on air quality of refinery plant in the area of Falconara M.ma"
 Supervisors: Ivano Vassura, Ing. Giovanni Bartolini
 Activity: Analysis of the refination process of the crude oil, and processes of pollutants removal like Claus process. Identification of the gases pollutants species issued from the plant site and their distribution in the atmosphere between 2011 - 2016 in different site across the Marche region. To see dependencies for pollutants species, it has been used correlations indexes between pollutants data recorded at different sites.
 Skills acquired: knowledge of Legislative Decree 155/2010 and OHSAS 14001 certification, environmental monitoring of gases pollutants and methodology of sampling, and refinery production process.
