10

The penitentiary on Blackwell's Island, now Roosevelt Island, in the 1910s. Built in 1832, it was demolished in the 1930s. New York City Municipal Archives

By **Christopher Gray**

Feb. 9, 2012

PLANS are moving ahead to replace the 1939 Goldwater Hospital on Roosevelt Island with a \$2 billion [graduate school](#) in applied sciences. This will be a new chapter in the history of the island, which for 100 years was a center of refuge and care, with hospitals and asylums.

5 fast facts

- Mayor Bloomberg launched a global competition for NYC campus in 2011
- Today the school has 8 master's and 4 PhD programs with 500+ grad students
- More than \$1B in philanthropic support has been raised for campus and public programs
- Entrepreneurship programs have created 100+ startups valued at \$550mm
- Public programs have doubled the number of CUNY women in CS, engaged 10K+ K-12 students, 250 teachers

Cornell Tech's \$750mm campus on Roosevelt Island is NYC's newest center for innovation

The Bloomberg Center is one of NYC's only buildings designed to be net-zero

The campus "Tech Walk" brings together the Cornell Tech and local communities

New York City's Unique Tech Position

- Attracts Top Talent
- Global Financial Center
- Celebrates Diversity and Inclusion
- Tradition of Social Impact
- Cultural Influence

"San Francisco is over-indexed on tech, New York City has [other sectors such as] government, media and culture, which has balanced it. It's made New York a more attractive city where venture capitalists and young people want to be."

Upal Basu, NGP Capital

Home > Technology

April 28, 2023 01:53 PM

New York is closer than ever to beating the Bay Area on tech

CARA EISENPRESS

EMAIL SHARE TWEET IN SHARE

New York's tech industry is nipping at the heels of the long-dominant Bay Area.

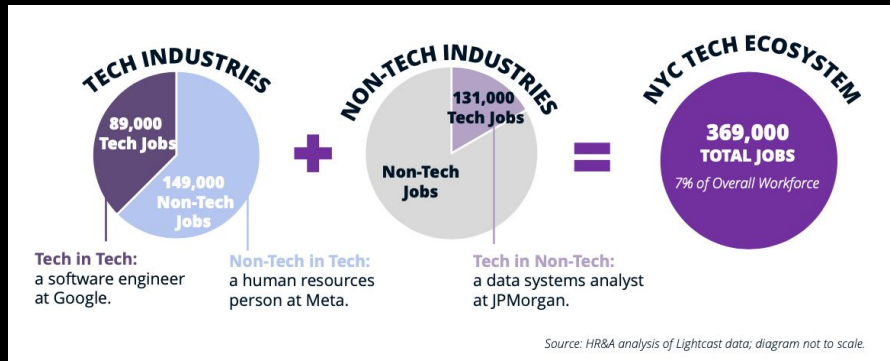

Bloomberg

The tech ecosystem in the city has for years been second to the Bay Area, where a larger and richer world of technology companies, investors and engineers has been flourishing for decades longer. The odds were long that New York could catch up.

Now, the two cities are running closer to neck and neck than ever before.

“New York is poised to become the premier technology ecosystem and the ideal place to launch the defining companies of the next decade...The city's vibrant culture, diverse industries and top talent are fueling its growth....we believe that New York will play a crucial role in fostering the transformative companies that will drive significant advancements in the coming years.”

Urban Tech Hub

Leveraging the power of technology to make cities **stronger, fairer and more resilient**

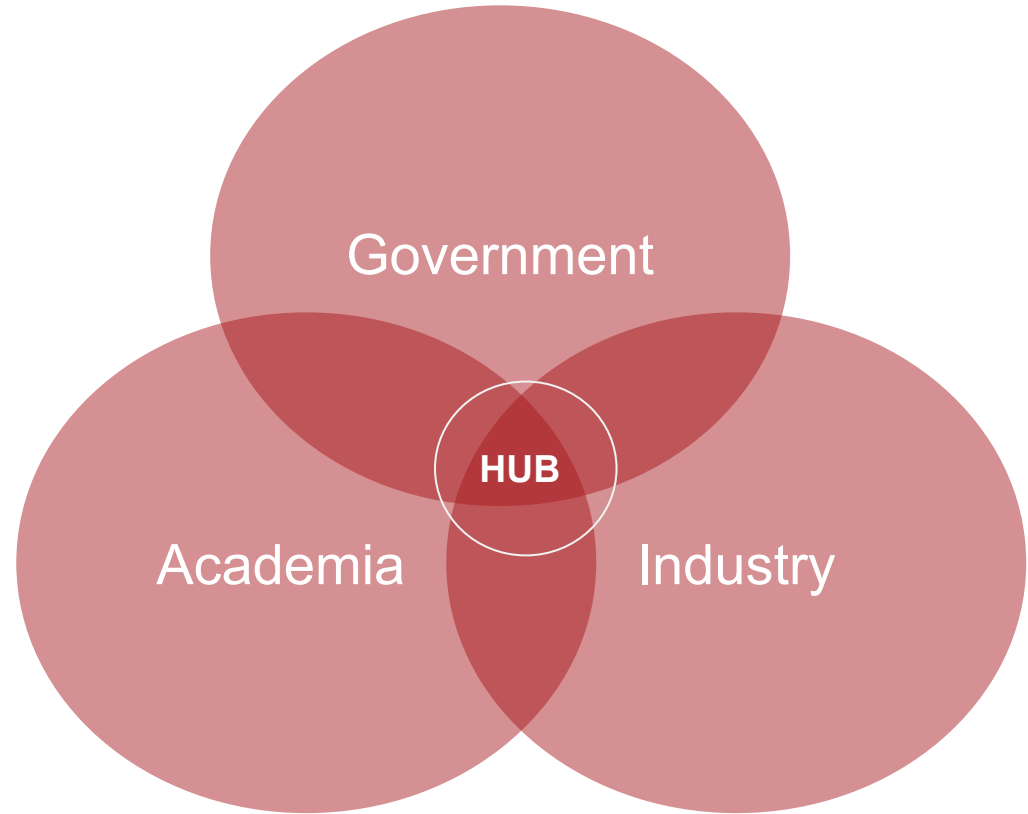

JACOBS
INSTITUTE

AT
CORNELL
TECH

What is a HUB?

*The Hub is a connector that **bridges the gap** between academic resources and public needs - organizing strategic partnerships, developing products and new programs between academia, industry, communities, and government.*

Our Approach

ENGAGE

the city, communities and companies on impactful research

CONVENE

key community and thought leaders

ATTRACT

interesting and influential outside voices to campus

DEVELOP

new projects, products and partnerships

Our Mission

We address pressing urban challenges and discover **new ways that digital technology can drive solutions**, engaging thought-leaders and communities to realize the positive impact of urban technologies.

Research

Attract and support leading faculty and researchers in the development and deployment of advanced technologies that address urban challenges.

Educate

Educate the next generation of tech talent focused on improving cities and expand the responsible adoption of technology through

Engage

Develop rich and diverse projects and partnerships that bridge industry leadership and public needs.

Build

Support the expansion of the NYC tech ecosystem by supporting entrepreneurs who are building the next generation of urban tech

The Future of Urban Tech

Self-repairing roads and sewers. Forests and farms inside buildings. Software that follows our instructions rather than following us around. These are just some of the possibilities and pitfalls for urban tech in the decade ahead. This site is a kaleidoscope that lets you explore future breakthroughs, innovations, and applications that will reshape our cities and communities.

Read the **introduction**

View the **horizon scan explorer**

Explore a forecast

Supercharged Infrastructure

Urban systems converge into a deep, actionable web.

Wild & Well

Urban design taps life science to improve well-being.

Resilient Corridors

Sustainable neighborhoods scale up.

Dark Plans

The chaos of urban life gives way to an algorithmic hum.

New Screen Deal

Inclusive innovation strikes back at surveillance capitalism.

Urban Innovation Industrializes

Big business cracks the code of the city.

NYC Urban Tech Ecosystem Analysis

To create this analysis of New York City's new urban tech ecosystem, we screened thousands of tech enterprises throughout the five boroughs. To date, we have identified **510** engaged in urban tech. These were organized into eight categories of essential urban systems for buildings, food, energy, mobility and more. Two more categories cover innovations and resources that push everyone in urban tech forward.

NYC's Urban Tech Engine

Anticipate the impacts of new technologies in cities

Tree Folio NYC

Design Across Scales Lab, Cornell AAP
Alexander Kobald
Joe Ferdinando

- A high-fidelity point cloud models of each street tree in NYC.
- Includes a visualization of the hyper-local impacts of shading on surrounding streets and buildings.
- Will be used to develop future tree planting strategies that maximize local impacts of individual trees for their cumulative impact against climate change.

Efficiency and Equity in resident crowdsourcing

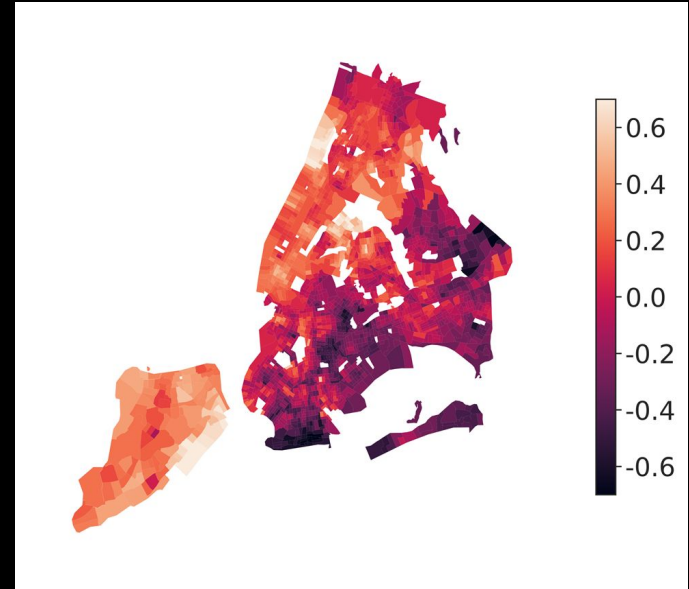

Asst. Prof. Nikhil Garg

The 311 system is used by NYC to learn about problems (potholes, fallen trees) that need to be fixed; agencies schedule inspections and work orders in response to reports

This is a large crowdsourcing online decision-making and resource allocation task, but there are many potential areas for inequities and inefficiencies:

- People in different neighborhoods may report problems heterogeneously
- The city may schedule inspections suboptimally

Data-driven tools are being developed to audit the current system and engineer interpretable, deployable inspection scheduling policies

lighter colors mean higher 311 reporting rates

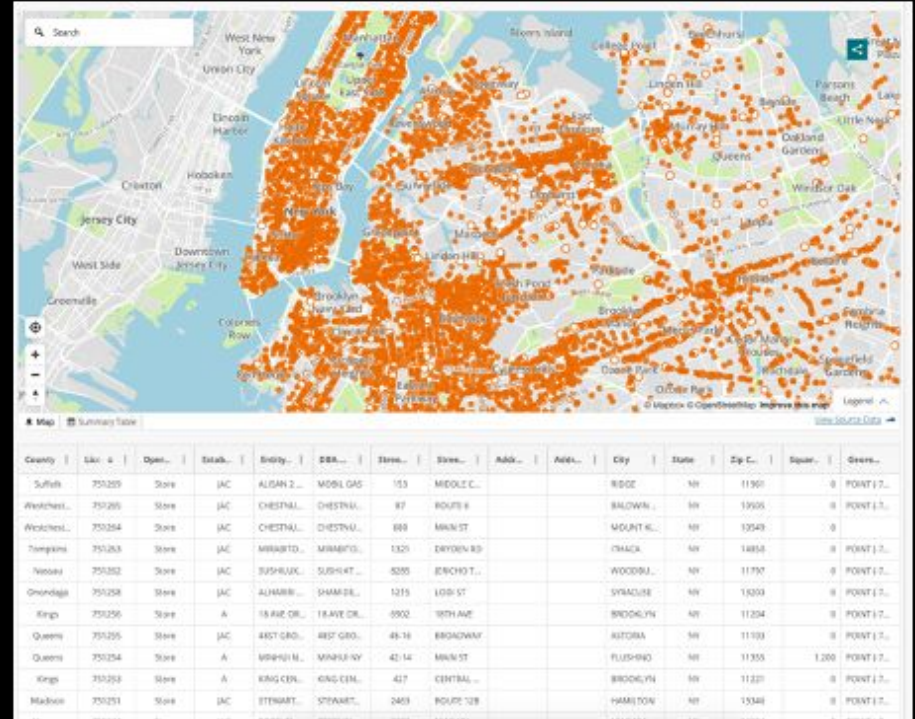

Urban Friendly e-Retail

Asst. Prof. Omar El Housni
Prof. Huseyin Topaloglu

Model and algorithms for inventory management and assortment optimization for online retail

- Finding the right product variety with limited storage in urban fulfillment centers
- Optimizing the safety stock
- Using local businesses for additional storage
- Personalizing the assortment offered for each customer

Data analysis of NYC food stores to study possibilities for locating forward distribution centers and alleviating food deserts.

Rebooting NYC

Rit Aggarwala - 2021 Urban Tech Fellow

This year-long effort included a set of strategic recommendations for how the next mayoral administration and City Council should leverage technology to improve the lives of New Yorkers.

Foundations

Tech progress requires reassuring the public on privacy and developing greater capacity to implement tech solutions

Equity

Ensuring all New Yorkers can participate in the digital economy is a prerequisite for the City to rely more on what tech offers

Systems

Many City services and functions can be improved with technology

Engagement

A key area where the City can make use of technology is in greater public engagement and transparency

Futureproofing

The City has failed to get ahead of new technologies; existing institutions are not equipped to forecast how urban tech will evolve

The Affordable Housing Application

Mirtha Santana - Urban Tech Fellow

Vacancy of new units of affordable housing is a systemic problem that creates challenges for tenants and developers. Today, the processes used by the city to market new-construction affordable (or income restricted) homes is suboptimal. This research will investigate how technology can be used to improve the experience of applicants and property owners, centering the experiences of low income renters.

- Convene a task force of people with lived-experience,
- Interview property owners, advocates, community based organization and government,
- Develop process maps,
- Analyze the costs associated with current processes
- Research case studies of cities that have used tech to improve benefit delivery,
- Explore data sharing agreements

DEVELOPMENTS HOME > DEVELOPMENTS > NYC DEVELOPMENT CO-LOCATES SHELTER AND AFFORDABLE HOUSING

The Metaverse Metropolis

Greg Lindsay- Urban Tech Fellow

- Meta, Apple, Sony and others are investing \$\$\$ in “the Metaverse” – a new computing paradigm in which information and services are overlaid on urban infrastructure. Given how much cities struggled with the last wave of “disruptive” technologies, how can they build capacity and alliances this time around?
- “The Metaverse Metropolis” has assembled a cohort of 20+ current- and former public officials from NYC, LA, DC, Philadelphia, Miami, etc. to educate and build a community of practice around augmented reality.
- Timeframe: January-June 2023, with a capstone event in July 2023 and final report in Fall 2023

Supporting Participatory Learning in Urban Agriculture with Wireless Sensing and VR

Rajalakshmi Nandakumar

Noah Snively

- Wireless sensing for detecting metal contaminants
- Virtual Reality Platform for Agricultural Extension
- Reconstructing 3D Models of Plants using Deep Learning

“New” New York: Initiative 31 Blueprint

Cara Eckholm - Urban Tech Fellow

In December 2022, New York’s Governor and Mayor released the “New” New York report focussed on transforming New York City’s job centers to support the ways people will live and work in the future. **Initiative 31** in the report focuses on the goal of making NYC the global leader in urban technology. To advance this work, the City aims to build a consolidated “front-door” for engaging and growing the urban tech sector. Cornell Tech is helping the City of New York design a research-backed blueprint to implement Initiative 31.

The goals of the research are:

1. Improved use of tech to achieve New York’s policy goals
2. Growth of the urban tech sector (market size, job creation)
3. Establish New York’s brand as the leader in urban tech

Education

Master of Information Science with a Concentration in Urban Technology

Urban Data Prof. Emma Pierson

The basic goal of this course is to empower students by closing the gap between the data-related questions asked and the ones we have the technical training to answer.

Urban Systems Michael Samuelian

How do systems make a city? This course explores how a city is composed of complex interactions of urban systems, ranging from infrastructure and transportation networks to social, cultural and political systems.

Urban Design Yasmeen Pattie Steven Stainbrook

What is urban design, and how does it impact innovation? In turn, how can innovation, especially in technology, address urban issues?
