

# SafeSmartInfra

Sustainable and Resilient Infrastructures  
for Better Transport Systems

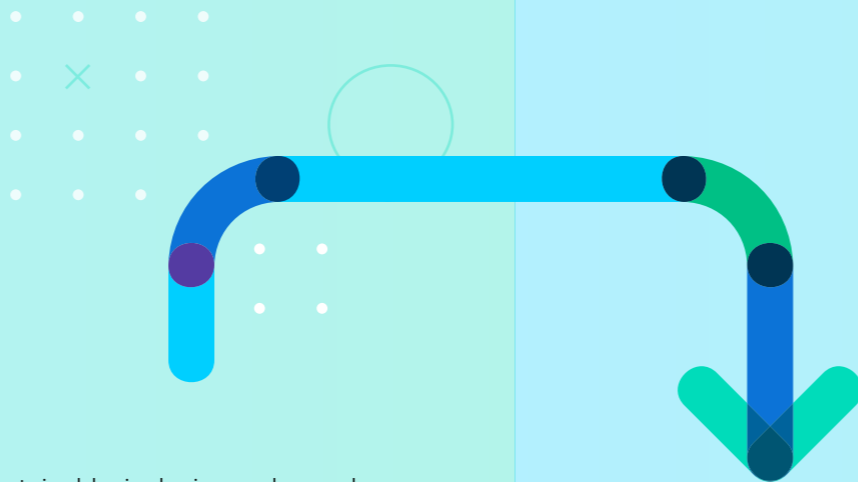

# Carbon neutrality & the role of transport systems

Transport systems are at the heart of the EU's transition towards climate neutrality: in fact, transport accounts for a quarter of the Union's Greenhouse Gas emissions and these continue to grow.

To reach the goal of reducing transport-related emissions by 2050 of 90%, transport systems need to become more resilient, resource-efficient, climate and environmentally

friendly, safe, smart, sustainable, inclusive and seamless for the benefit of all citizens, the economy and society.

However, despite a high demand in qualified researchers and managers in the field, there is still a lack of training and specific expertise in transport infrastructure chain.

# Training new professionals

**SAFERUP!** and **SMARTI ETN** are two EU funded Marie Curie projects aiming to train new professionals able to provide future generations with more liveable cities and to conceive the future of transport infrastructures by applying solutions developed through cutting-edge research.

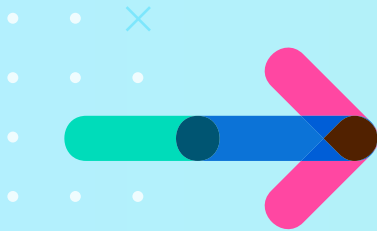

# Infrastructures for better transport systems

Set for revolutionizing the EU's transport infrastructure system, the #SafeSmartInfra Cluster will deliver:

- Smart, practical solutions and technologies to solve issues linked to urban infrastructures and mobility
- Guidelines to support policy makers in generating decision-making frameworks including these innovative approaches.

# Value and facilitate the uptake of the solutions of the #SafeSmartInfra Cluster.
